The present sequence is transporter and ion channel-1 (TRICH-1) protein.

TRICH is used as vaccine. TRICH is useful for treating a disease or condition associated with decreased expression of functional TRICH, such as transport disorder including amyotrophic lateral sclerosis, cystic fibrosis, Becker's muscular dystrophy, angina and hypertension, neurological disorders including Alzheimer's disease, amnesia, bipolar disorder, disorder, arrow prince, creptoral neoplasms, plck's disease, imental disorder, muscle carnot, andien, depression, epilepsy, ischaemic cerebrovascular disease, and disorder including disease, mental disorder, muscle barkinson's disease, demyelinating disease, mental disorder, muscle cardiomyopathy, myocarditis, polymyositis, arrhythmias and sasonal affective disorder, muscle dermatomyositis, arrhythmias and asthma and immunological disorders including AIDS, adult respiratory distress syndrome (ARDS), allergies, anaemia, diabetes mellitus, rheumatoid arthritis, scleroderms, syndrome, systemic lupus erythematosus and other diseases including sickle cell anaemia, Wilson's disease, Castracts, infertility, pullmonary contents sendiorisis, Grave's disease, Cushing's disease, Addison's disease, psoriasis and viral, bacterial, fungal, helmthic and protozoal currects infections. TRICH DNA is useful in gene therapy and in diagnostic

```
The present sequence is that of human solute carrier type 2A (SLC2A) polypeptides 12735153 and 7657681. In the present invention, genetic screens were designed to identify modifiers of the p53 pathway in prosophila in which p53 and solverspressed. Human orthologues

Crosophila in which p53 assolverspressed. Human orthologues

(polynucleotides and polypeptides) of one such modifier were then identified, including the present polypeptides. SLC2As are glucose transporter proteins with sugar transporter domains. They are attractive drug targets for treatment of pathologies associated with a defective p53 signalling pathway, such as cancer. The invention provides in vitro and in vivo methods of assessing SLC2A function. Modulation of an SLC2A or its binding partners is useful for understanding the association of the p53 pathway and its members in normal and disease conditions and for developing diagnostic and therapeutic modalities of p53-related pathologies. SLC2A-modulating agents that act by inhibiting or enhancing SLC2A expression, directly or indirectly, e.g. by affecting an SLC2A function such as transport or binding activity, can be identified using methodies, antisense oligonucleotides and phosphothioate morpholino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240

                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to GLUTX proteins (AAF55865-AAF55871 and AAB66932-AAB66941). The GLUTX proteins are related to the facultative glucose carriers GLUTI-GLUTS and have hexose binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention and treatment of hexose transport disorders such as ischaemia, diabetes,

The GLUTX proteins are related to the facultative glucose carriers GLUTI-GLUTS and have hexses binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention and treatment of hexose transport disorders such as ischaemia, diabetes, hyperglycaemia, hypoglycaemia, a glucose metabolism disorder and/or a neurodegenerative disease. The present sequence is rat GLUTX1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to GLUTX proteins (AAF55865-AAF55871 and AAB66932-AAB66941). The GLUTX proteins are related to the facultative glucose carriers GLUT1-GLUT5 and have hexose binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention and treatment of hexose transport disorders such as ischaemia, diabetes, hyperglycaemia, hypoglycaemia, a glucose metabolism disorder and/or a neurodegenerative disease. The present sequence is a consensus sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120

                                                                                                                                                                                                                                                             477
                                                                                                                                                                                                                                                                                    478
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to GLUTX proteins (AAF55865-AAF55871 and AAB66932-AAB66941). The GLUTX proteins are related to the facultative glucose carriers GLUT1-GLUT5 and have hexose binding and/or transport
